

TPU BELTS

THERMOPLASTIC POLYURETHANE

CENTERCLEAN™ FOOD GRADE BELTING

CenterClean is a center driven food processing belt appropriate for general food processing and troughing applications.

CenterClean self-tracking belts are constructed with flexible urethane and sealed Kevlar™ tension members. This construction allows CenterClean belts to be troughed or run on small diameter pulleys with minimal belt stretch. The smooth surfaces facilitate cleaning to a microbial level.

CC40

CenterClean belting has drive teeth only in the center three inches of the belt and a pitch length of 1.575" (40 mm). The lack of extended teeth makes this belt appropriate for self-tracking and troughing applications as well as general processing.

FEATURES

- Clean-in-place process
- Urethane material compatible with wash down environments
- Kevlar tension members provide high strength, low stretch
- Sealed edges and tension members prevent ingress of microbes
- Can be welded endless or spliced with stainless steel or PosiLace™ pin system
- USDA accepted for meat, poultry and dairy processing equipment

BENEFITS

- Reduction of in-process bacteria growth
- Cut water usage and costs by 45%
- Longer belt life due to minimal belt stretch
- Reduce cleaning time by 50%
